## **Introduction**

Each year since 1993 the Kansas Hospital Association (KHA) has provided hospital discharge data to the Kansas Department of Health and Environment (KDHE) for dissemination to policy makers, program managers and the public. One of the uses of these data is for identifying predominant reasons Kansans are hospitalized, and to see if those reasons vary by geographic area. The present report summarizes information pertaining to the number of hospitalizations by Diagnostic Related Group (DRG), both statewide and by county of residence, in the most recent three-year period for which data are available, 2007-2009. In data with discharge date of October 1, 2007 or later, MSDRGs have been crosswalked to CMS V24 DRGs for comparability.

Section I presents the demographic break down of the 2007-2009 data, by age group, by sex and by race. Section II contains the statewide analysis of data by DRG, while section III has each county's analysis. Section IV contains tables of county rankings. No data is displayed for a single year because of small numbers for certain DRG categories. Data for all DRGs that pertain to maternity (mothers and neonates) were excluded from detailed analysis due to their frequent occurrence in all counties.

The tables in Section III (pages 13-120) display the twenty most frequent DRGs in each county, averaged over the years 2007-2009, along with the corresponding values for mean age and length of stay (LOS). Each table also contains ratios of the number of cases per 100,000 population for each county and for the state of Kansas (averaged over 2007-2009). Due to the sparse populations of some Kansas counties and in the interest of preserving patient confidentiality, numbers and rates do not appear in all cases. Exclusions include the following:

- Numbers are not displayed for any DRG with fewer than six cases.
- Rates are not displayed for any DRG where the frequency is less than twenty.
- All source data are summarized by DRG; further detail relating to diagnosis is unavailable.

For further information about this report and other data resources, contact:  
Public Health Informatics at (785)296-5281

## **Methods**

Kansas Discharge data were analyzed for 2007 to 2009. The records were identified for analysis based Diagnostic Related Groups (DRG)s internal to the data. In data with discharge date of October 1, 2007 or later, MSDRGs were crosswalked to CMS V24 DRGs for comparability with older data.

### Section I - Demographics

Demographic reports were prepared based on gender, standard age groups, race/ethnicity, and rate per 1,000 population.

### Section II – Most Frequent Conditions Classified by DRG Statewide

For 2007-2009, for a specific DRG:

Mean Number of Cases per Year =  
(Total Number of Cases / 3)

Rate per 100,000 Population =  
(Mean Number of Cases per Year / Average Kansas Population 2007-2009) times  
100,000

### Section III – Most Frequent Conditions Classified by DRG for Each County

For 2007-2009, for a specific DRG:

Mean Age =  
Total Age of All Patients / Total Number of Cases

Mean Length of Stay (LOS) =  
Total LOS for all patients / Total Number of Cases

Mean County Rate per 100,000 Population =  
(Mean Number of Cases per Year in the County / Average County Population 2007-  
2009) times 100,000

### Section IV - County Rankings

Cases per 1,000 Population =  
(Mean Number of Cases per Year in the County / Average County Population 2007-  
2009) times 1,000

Rank:

Counties are ranked from highest (1) to lowest (105) in the categories of “Cases per 1,000 Population,” “Mean LOS” and “Mean Age.” Two counties may have the same rank if their numbers are the same, but lower rankings are not affected. For example, if the number 10 appears twice and has a rank of 5, then 11 would have a rank of 7, with no number having a rank of 6.

## **Abbreviations Used in DRG Descriptive Names**

Alc	Alcoholic
AMA	Against Medical Advice
AMI	Acute Myocardial Infarction
CDE	Common Duct Exploration
Card	Cardiac
Cirr	Cirrhosis
D&C	Dilation & Curettage
Debrid	Debridement
DO	Disorders
Diag	Diagnosis
ESW	Extracorporeal Shock Wave
Exc	Except
GI	Gastrointestinal
Hepa	Hepatitis
Impl	Implant
Int Fix	Internal Fixation
OR	Operating Room
Pdx	Principal Diagnosis
Proc(s)	Procedure(s)
Sys	System
T&A	Tonsillectomy and Adenoideectomy
URI	Upper Respiratory Infection
W CC	With Comorbidities or Complications
W/O CC	Without Comorbidities or Complications
Wnd	Wound

## **Notes and Limitations**

Kansas Community Hospital Discharge data, provided by the Kansas Hospital Association (KHA), are obtained from most Kansas community hospitals. Community hospitals are non-federal, short-term, general or other special hospitals whose facilities are open to the public. Community hospitals are asked to submit data voluntarily to KHA which in turns compiles the dataset and provides it to the State of Kansas. The number of hospitals that submit data to the database varies from year to year.

**County of Residence:** KHA data are reported by the Kansas County of residence as it was reported by the patient or informant upon patient admission. Admissions to Kansas hospitals involving out-of-state residents are excluded. The KHA dataset contains discharge data on Kansas residents treated at community hospitals in adjacent states. Admissions of Kansas residents into out-of-state hospitals are included for Missouri, Colorado, Nebraska, and Iowa Hospitalizations. The quantity of those records varies annually.

**Length of Stay:** Hospital discharge data includes information on patients who were admitted and had a length-of-stay of greater than 24 hours. The term hospitalization refers to a hospital discharge of a Kansas resident from non-federal and non-state short-term (average length of stay less than 30 days) general and specialty hospitals whose facilities are open to the general public.

**Excluded Hospital Admissions:** While most of the state's hospitals are community hospitals that submit, facilities that are not included are: hospital units of institutions, long-term care hospitals, psychiatric hospitals, federal hospitals, and alcoholism and chemical dependency facilities. Excluded from hospitalization data are discharges from long-term care facilities, as well as those from long-term care units within general hospitals (i.e., swing bed, skilled nursing, and intermediate care units). Also excluded are discharges from residential care facilities and residential care units within licensed hospital facilities. Emergency department, specialty hospital, Veteran's Administration, state hospital and Indian Health Service data are not included in the dataset.

**“Primary Payer”** is defined as the primary payer reported at the time of patient hospital admission and may not reflect the actual payer of record when the hospital bill is ultimately settled.

**Newborns** are a special hospital discharge category. All newborns are recorded in the hospital discharge data as an admission. Mothers who gave birth, as well as persons hospitalized for pregnancy and childbirth-related conditions are included.

**Hispanic Origin:** Beginning in 2003 Kansas hospitals began reporting Hispanic origin separately from race. This enabled tabulations by Hispanic origin. Prior to the creation of a variable to capture Hispanic origin, hospitals may have reported a patient's Hispanic origin in the

race category as "other" rather than white. Population-based rates involving race and Hispanic origin use the bridged-race population estimates provided to the National Center for Health Statistics by the U.S. Census Bureau as the denominator. For more information on the estimates, [visit NCHS](#).

**Missing data** are somewhat problematic in the KHA dataset. Some records in the data submitted to the state may be missing race, ethnicity, age, or sex. For example, for the years 2007-2009, there were about 1.8 million records of which about 1.1% does not have a value for age. The extent of missing or unknown values in the data affects any population-based rate. The greater the number of missing values, the lower the population-based rate will be. This under-reporting of rates should be kept in mind during result interpretation.

**Lack of Patient Identifiers:** Kansas community hospital discharge data cannot be merged due to the lack of a unique record identifier. This impacts ability to conduct statistical analysis in that individuals admitted multiple times in a single year may be counted as unique patients producing inflated counts which can affect statistical reliability. Therefore, it is better to use the number of discharges as the unit of analysis.
